Purpose

A Lobby Division is used to control access to a building or area during fires, hazardous materials incidents, rescue operations or any other situation where it is necessary to control and maintain accountability for the entry and exit of personnel.

Access control is established at an identified entrance/exit point from the building or area involved. In the case of a high-rise building this is normally the ground floor lobby area. In other cases it may be any suitable entrance/exit point or a location designated to meet the needs of the situation.

In the case of a technical operation, i.e. hazardous materials incident, trench rescue, or confined space, the perimeter shall be defined by **HAZARD ZONE** tape with an entrance/exit point identified.

The Lobby Division is the only location where personnel shall enter or exit from the controlled area, in order to maintain full accountability. Lobby Sector personnel must control all access points when alternate entrances are available.

Lobby Division personnel will limit entry into a controlled building or area to those authorized by Command and to personnel having the required level of protective clothing and equipment appropriate for the situation.

The Lobby Division will record the names, times, and assignments of all personnel entering and exiting the controlled area. Accountability tags will be collected from all personnel entering and should be retrieved on departure.

BUILDING/AREA ACCESS CONTROL

A Lobby Division should be established by Command at high-rise fires and other situations where control of access is necessary. When beginning operations at these incidents, at least one firefighter from the initial arriving companies should be left to establish a Lobby Division. A company should be assigned to the Lobby Division, as quickly as possible and additional resources may be needed in major situations.

All personnel entering the building or area must report to Lobby Division before reporting to any other sector or assignment. Company officers will keep crews intact while awaiting assignment.

Salt River Fire Department Operating Guidelines

Lobby Division

2 of 2

Civilian personnel entering the building area shall be accompanied by a firefighter with a portable radio.

Other incidents that may require a Lobby Division shall include hazardous materials, confined space, trench rescue, water rescue, structural collapse, and any other incident where control of access is critical.
